Comments report

B. 7. Comments: (BAI YU)

The teaching assistant is competent and knowledgeable about the field. Perhaps my only problem with him was that rarely I did not understand what he said because of his accent, but he is available to any question so it is not a relevant problem.

Not very coherent, pace is too fast, reading solutions is not explaining, scribbling on top of slides is not clear, feedback on PS is not timely, giving us the tools to solve the PS after we had to solve it is not helpful either.

The TA is great!

Some more hints and discussions about the exercises in the problem sets should be provided before the lecture, not afterward.

Yu is very passionate and knowledgeable, but it was a bit hard to follow TA session as well.

Yu was helpful and easy to contact. However, during the lectures I think he struggled to express some concepts clearly. I believe this is partly due, once again, to the online format as it was difficult to write equations and draw figures.

Very professional
